

# Sakthivel Ponnampalayam Sivakumar

Boston, MA | (857)-506-5533 | [ponnampalayamsivak.s@northeastern.edu](mailto:ponnampalayamsivak.s@northeastern.edu) | [linkedin.com/in/sakthivelps/](https://www.linkedin.com/in/sakthivelps/) | [github.com/Sakthi-PS7](https://github.com/Sakthi-PS7)

## EDUCATION

<b>Northeastern University – Boston, USA</b> <u>Master of Science in Electrical and Computer Engineering</u> Coursework: Computer Architecture, Operating Systems, Hardware and System Security, Computer Networks	Dec 2026 <b>GPA: 3.5</b>
<b>Anna University - Chennai, India</b> <u>Bachelor of Engineering in Electronics and Communication Engineering</u> Coursework: Digital Design, Embedded Systems, RTES, Digital Signal Processing (DSP), Internet of Things (IoT)	May 2024 <b>GPA: 3.6</b>

## TECHNICAL SKILLS

**Languages:** C, C++, Python, Assembly (RISC-V), Verilog/System Verilog, Shell/Bash Scripting  
**Test Equipment & Tools:** Logic Analyzer, Oscilloscope, Multimeter, Debugger, Soldering, CMake, Git  
**Boards & EDAs:** RPi, Xilinx FPGA, STM32 Nucleo, Arduino, ESP8266, Wireshark, KiCAD, Vivado  
**Protocols:** UART, SPI, I2C, CAN, HTTP, TCP/IP, DNS | **OS:** Linux, Windows

## WORK EXPERIENCE

<b>Northeastern University – Boston, USA</b> <b>Teaching Assistant - Digital Design &amp; Computer Organization</b>	<b>June 2025 – Aug 2025</b>
<ul style="list-style-type: none"><li>Facilitated 10+ students to build a RISC-V like single cycle processors on TUL PYNQ Z2 boards using <b>Xilinx Vivado</b></li><li>Conducted weekly recitation sessions covering digital logic fundamentals including ALUs, register files, memory units, and instruction decoders resulting in 90% of the class completing the lab experiments on time</li></ul>	
<b>Teaching Assistant - Fundamentals of Networks</b>	<b>May 2025 – June 2025</b>
<ul style="list-style-type: none"><li>Guided 15+ students in learning the OSI fundamentals with conceptual and Wireshark based laboratory assignments</li><li>Assisted students on a biweekly basis on socket programming in python, routing protocols (TCP/IP) and access networks</li></ul>	
<b>Emertxe – Bangalore, India</b> <b>Embedded and IoT Engineer Intern</b>	<b>Mar 2023 – May 2023</b>
<ul style="list-style-type: none"><li>Developed a low-cost (&lt;\$15) RT-Health monitoring system using ESP32, MAX30102, &amp; OLED to measure SpO2, BPM, body temperature, and saving it on ThingSpeak to maintain a cloud-based patient record</li><li>Implemented a RPi-based smart traffic control system using YOLOv5 and OpenCV, dynamically adjusting signal timing based on vehicle count and reducing average simulated wait time by 27%</li></ul>	
<b>Team Sakthi Racing – Coimbatore, India</b> <b>SAE Formula Student (Electronics Team)</b>	<b>Aug 2021 – Sept 2022</b>
<ul style="list-style-type: none"><li>Optimized a Real-Time DAQ system using Arduino Nano to log data from 6+ sensors with less latency and improved accuracy</li><li>Integrated I2C, UART and ADC interfaces to capture and synchronize data from ECU, GPS, and other onboard sensors</li><li>Volunteered with the management team and created 5+ Canva designs for the business plan pitch at SUPRA SAE 2022</li></ul>	

## PROJECTS

<b>Firmware Development for TMS</b> (C++, Xenomai RTOS, RTXi, Linux)	<b>July 2025 – Present</b>
<ul style="list-style-type: none"><li>Exploring and building <b>hard real-time plugins in C++</b> within the RTXi framework, gaining hands-on understanding of data flow, execution loops, and latency-sensitive control structures critical for neurophysiological feedback systems</li></ul>	
<b>Development of OS Primitives</b> (C, Linux CLI, SSH, Xen)	<b>Feb 2025 – Mar 2025</b>
<ul style="list-style-type: none"><li>Developed a <b>bare-metal OS implementation</b> in C, creating custom system call wrappers (read, write, exit), ELF executable loader, and memory management functions using mmap and achieving successful execution of dynamically loaded programs through custom syscall tables</li><li>Engineered multi-threaded context switching mechanism with stack management, implementing yield functions and custom stack allocation (4096-byte stacks) to enable seamless thread switching between two processes</li></ul>	
<b>Reliable Data Transfer Protocol</b> (C++, Ubuntu, WSL, SSH, Vim)	<b>Oct 2024 – Dec 2024</b>
<ul style="list-style-type: none"><li>Implemented ABT and GBN in C++, achieving <b>95%+ packet delivery rates</b> under various loss and corruption scenarios while maintaining protocol correctness through comprehensive checksum validation and timeout management</li><li>Conducted comprehensive performance analysis comparing two transport protocols across 1000+ message transmissions, under 6+ different network conditions and window sizes as test cases</li></ul>
